INSPIRING ECOLOGY

Teaching Tomorrow's Ecologists

At Inspiring Ecology we offer top-quality, hands-on courses for students interested in ecology and broader biology on the banks of Loch Lomond.

With changes to the National 5 and the new Higher curriculum we can provide educational institutes with un-rivalled access to pristine terrestrial and freshwater habitat and use of state of the art facilities to deliver learning outcomes to classes.

Inspiring Ecology provides courses which cover the key areas outlined in the SQA course specifications such as;

- Biodiversity and the distribution of life
- Energy in ecosystems
- Sampling techniques and measurement of abiotic and biotic factors
- Adaptation, natural selection and the evolution of species and human impact on the environment
- Planning and designing experiments/ practical investigations to test given hypotheses
- Recording detailed observations and collecting data
- Drawing valid conclusions and giving explanations and suggesting improvements.

Inspiring Ecology also provides classroom support for schools who wish to explore a topic in greater detail, giving students a more comprehensive learning experience from experts in the field.

We are not restricted to certain courses - our flexibility and adaptability to your needs allows us to cater for students in S3 all the way to post-graduate level.

We believe our courses provide an important platform for students interested in biology as well as those considering biology as a career. Students will walk away from courses having improved their teamwork, problem solving and analytical thinking skills - traits desirable in all industries.

Our Ethos

This generation of students will face the toughest questions regarding climate change than any other generation in history.

With more and more demanding situations forced upon global ecosystems, combined with an increasingly unstable geo-political landscape, our planet is facing and will continue to face major issues over the next century.

We believe with the proper education, ethics and skills, this generation can stand up to future challenges and be world leaders in the fight for our natural world.
