

Wild Trout Trust
Job Description
Conservation Officer – Central & Eastern England

What and Who We Are After

The Wild Trout Trust (WTT), established in 1997, is a registered charity dedicated to the conservation of wild trout in Britain and Ireland through protection and restoration of habitat.

WTT works in both rural and urban catchments with a variety of stakeholder groups including fishing clubs and other community groups, riparian owners, wildlife, rivers and fisheries trusts and the conservation and regulatory agencies. The core conservation role of WTT is the practical delivery of Advisory Visits, demonstration events and river habitat improvement projects, working with these stakeholder groups, to make things better for our rivers and lakes, their iconic wild trout and associated biota, across Britain and Ireland.

The demand for our work has increased dramatically in recent years, so we're looking to employ another conservation officer, initially on a two-year contract, to join our existing team of six field officers, with responsibility for the hands-on delivery of our exciting wild trout conservation programme.

This will be a brilliant job for a dynamic, self-starting individual with significant fisheries management experience (particularly in salmonid fisheries), proven management and delivery of large-scale habitat improvement projects, excellent communication skills and the ability to get people onside and work successfully with a wide range of stakeholders. You will be part of an expert team, each working from home, reporting to WTT's Director of Operations and the board of trustees. You will work closely with fellow conservation officers and the regulatory agencies, especially in the east of England, but you need to be able to manage yourself and have the maturity and experience to be able to work unsupervised and to determine your own hours of work and priorities (within the framework of WTT's mission and charitable objectives).

The Conservation Officer's role will be to deliver large-scale river habitat improvement projects and to provide technical and practical support and advice to fishery managers and landowners, working with a range of governmental agencies and non-governmental organisations, to enhance the status of wild brown trout populations and consequently their associated floral and faunal communities. You will need the capacity to identify additional sources of funding, then pursue and secure them for project delivery and to contribute to the sustainability of this post and WTT more broadly.

The postholder will also be expected to contribute to the full spectrum of work undertaken by the WTT team such as informal review of other officers' reports, *ad hoc* provision of expert advice and attendance at, and presentations to, key events such as technical meetings and shows.

Geographical Range of Work

This postholder will work to enhance the status of wild trout populations, especially across central and eastern England and therefore a home base in this area is needed (or a willingness to move into the area).

In discussion with the Trust's Director of Operations and in response to demand, you may also be asked to undertake work in another Conservation Officer's geographical area.

Terms of Employment

The post will be offered on a full-time basis on an initial two-year contract.

Salary: £25000 - £30000 (based on experience of candidates).

WTT will provide a contribution to the employee's pension fund equalling 5% of salary, paid in monthly.

Holiday entitlement: 25 days per annum plus statutory public holidays.

The post will be home-based and the officer will be expected to travel as required. A vehicle is not provided but mileage expenses at HMRC rates will be claimable for work-related journeys. Wherever practical, the use of public transport should be first choice for all business travel. Other reasonable business expenses, as agreed with the Director of Operations, will be claimable, e.g. telephone, internet, equipment, protective clothing. There will be some periods of extended working that may require stays of more than one night away from home.

Summary objectives and job purpose

- Deliver large-scale river habitat improvement projects, working with appropriate regulatory agencies, river and wildlife trusts and local community groups, with a particular focus in Lincolnshire;
- Undertake Advisory Visits (AVs) and subsequent report compilation for fishing clubs, landowners, rivers and wildlife trusts;
- Provide follow-up and technical support for recipients of AVs;
- Provide project proposals as a follow-on from AVs to aid practical delivery by AV recipients;
- Organise and lead practical in-river days with volunteer groups, demonstrating the installation of trout habitat enhancement methods;
- Develop and facilitate partnership working and projects with a wide range of conservation partners and stakeholders, such as the river and wildlife trusts, state conservation and regulatory agencies, fishing clubs and other community groups;
- Attend events highlighting wild trout conservation, e.g. conferences, fishing club meetings;
- Coordinate activities with other WTT staff and volunteers.

Relationships

Within WTT:

- Close working relationship with WTT Director of Operations and trustees;
- Close liaison with other WTT Conservation Officers and staff, especially a fellow officer based in the English Midlands;
- Support from the Trust Administrator for payment of expenses, invoicing, etc.

External relationships with:

- Key river environment stakeholders such as the Environment Agency, the river and wildlife trusts, landowners, fishing clubs and conservation volunteers to assist in the identification and prioritisation of projects;
- Network of contacts with potential partners for projects;
- Potential funders, to enable project-funding applications to be clearly focused and successful;
- Academic and other bodies that will give input to, and review proposals for, the practical framework for measuring the results of projects and their impact on biodiversity.
